

## **Problem statement –**

### **Company name – Intelliswift**

Rails Assignment:

Create a Restful API solution to get all transactions for a specific consumer and or for a merchant. There should be three endpoints one for each dataset / table. Solution should include tests and several working examples. Bonus Points will be given for supporting Post and or Put Requests.

Tables 1

Name: Consumer

Data: First Name, Last Name, ID

Tables 2

Name: Merchant

Data: Merchant Name, Merchant ID, Domain

Tables 3

Name: Transactions

Data: Merchant ID, Consumer ID, Sale Amount, Date

Tech Specs:

- Ruby 2 or greater
- Database: anything but should contain at least a few transactions merchants and consumers.
- Framework: Rails, Sinatra, or Grape
